

CAPABILITIES STATEMENT

CORPORATE OVERVIEW

Bloom Public Health is a leading African public health action tank that mobilizes the continent's leading experts in designing and delivering innovative, evidence-driven solutions to Africa's most pressing health challenges. Headquartered in Nigeria, with operations across Rwanda, Zambia, Zimbabwe, Botswana, Lesotho, Ethiopia, and Cameroon, and a strategic presence in Switzerland, Bloom Public Health combines deep local expertise with global best practices to strengthen health systems and improve health outcomes.

We partner with governments, multilateral agencies, development partners, research institutions, and the private sector to accelerate locally-led, sustainable solutions that build resilient and self-reliant health systems across Africa.

CORE COMPETENCIES

PHARMACEUTICAL QUALITY SYSTEMS:

Delivering standard-setting pharmaceutical systems strengthening to support manufacturers, regulators, and governments in meeting international pharmaceutical standards and improving medicine quality across Africa, through strengthening national medicine regulatory systems, manufacturing support, research, and policy frameworks.

LABORATORY STRENGTHENING AND DIAGNOSTICS:

Providing technical assistance to institutions and facilities in setting up and optimizing laboratory services to meet global standards, in line with good laboratory practices.

PUBLIC HEALTH SUPPLY CHAIN MANAGEMENT:

Offering end-to-end supply chain technical assistance across all core areas including product selection and procurement, warehousing and distribution, logistics and inventory management, human resources and capacity building, supply chain audits, and financing.

PUBLIC HEALTH AND POLICY:

Supporting governments to co-create and deliver evidence-based health policies, effective regulations, laws and service delivery models to support community health resilience.

WHAT WE HAVE DELIVERED

- Laboratory Optimization through capacity building on laboratory strengthening, equipment maintenance, research in herbal and natural medicines, and diagnostic center setup to work better, faster and safer.
- Post-Market Surveillance study on the state of the Pharmaceutical Manufacturing Industry in Africa, produced evidence for policy, investment and donor coordination for achieving continental pharmaceutical sovereignty.
- Piloted the first pharmacy-delivered HIV pre-exposure prophylaxis (PrEP) model in Nigeria providing alternative access to HIV prevention services among at-risk adolescents and young adults in partnership with the University of Buffalo, USA.
- Optimized medicine supply chains through the drug revolving fund model at public health facilities, strengthening inventory management and improving pharmaceutical supplies.
- Designed the framework for a modern Pharmaceutical Park in Nigeria and Zimbabwe to boost local production, create jobs and foster economic growth.
- Provided technical assistance to Nigerian pharmaceutical manufacturers to attain WHO Prequalification (PQ) for local production of anti-malarial products.
- Guided laboratories to attain ISO 15189 & ISO 17025, and achieve the global benchmark for testing and calibration.
- Delivered capacity building on quality and reliability testing for the Standard Organization of Nigeria (SON) and the National Laboratory for Quality Control of Medicines and Expertise (LANACOME), Cameroon.
- Developed Quality Risk Management Frameworks for strengthening pharmaceutical quality assurance and regulatory systems using Quantitative Structured-Activity Relationship (QSAR) analysis to assess the toxicity risks associated with impurities in Misoprostol medicines.

CURRENT PROJECTS

1

Lassa Fever Vaccine Coalition Project:

A collaborative partnership aimed at promoting regional leadership, country-led research and coordinated policy development toward accelerating Lassa Fever vaccine readiness in endemic West African countries. Funded by Coalition for Epidemic Preparedness Innovations (CEPI) and coordinated by the West African Health Organization (WAHO).

2

Anambra State Laboratory Optimization Project (ASLOP): Aimed at strengthening diagnostics services in General Hospital laboratories in Anambra State to improve testing accuracy and accessibility. Partnering with State Government, Sydani Group, Erba Mannheim and Worldwide Commercial Ventures Limited.

3

African Vaccine Academy (AVA): Bloom Public Health's human capital development initiative on vaccine and biologics manufacturing, and regulatory systems for Africa to attain its ambitious goal of producing 60% of Africa's vaccine needs by 2040. Implimented in partnership with Biotech Training Facility, Netherlands.

OUR COMPARATIVE ADVANTAGE

Deep Continental Expertise:

Years of collective institutional knowledge in navigating African healthcare landscapes, regulatory environments, and market dynamics.

Result-Oriented Approach: A proven track record of converting public health funding into sustainable, highly scalable institutional infrastructure.

Global-Local Bridge:

A trusted, vetted partner to multilateral institutions, blending international compliance with grassroots execution capabilities.

Health Equity Focus: Helping our clients and the community at large achieve equitable health outcomes that improve lives and lead healthy behaviors.
